Hydropower provides almost 7% of the nation's electricity, and yet it is overlooked.

As the nation's first renewable resource, harnessing the power of our blue planet is the future in powering our homes, schools and businesses, clean and carbon-free.

WATER POWER WEEK 2023

WASHINGTON, D.C. MAY 8-10

This event provides a once-a-year opportunity for those in the US hydro industry to focus on the regulation, policy, markets, and legislation. It's also an important time to hear from and connect with others who affect the industry – politicians, regulators, resource agencies, and river and environmental communities. New and pending legislation and policy will have a transformative impact on water-power – now, and for years to come. Get up to speed at Waterpower Week on the latest developments that will impact your day-to-day work.

Discover hydropower and join us in the nation's capital!
